Outline

- ❖ The SEARCH Program
- ❖ SEARCH for DAMOCLES
- ❖ Next Steps

Goal of SEARCH

SEARCH is a U.S. multi-agency program designed to understand the nature, extent, and future development of arctic change

- ❖ **Interrelated arctic changes** are occurring across terrestrial, oceanic, atmospheric, and human systems
- ❖ Observed changes have **significant impacts** on ecosystems and society
- ❖ **Anthropogenic activities** are a major cause of the observed changes

Development of SEARCH

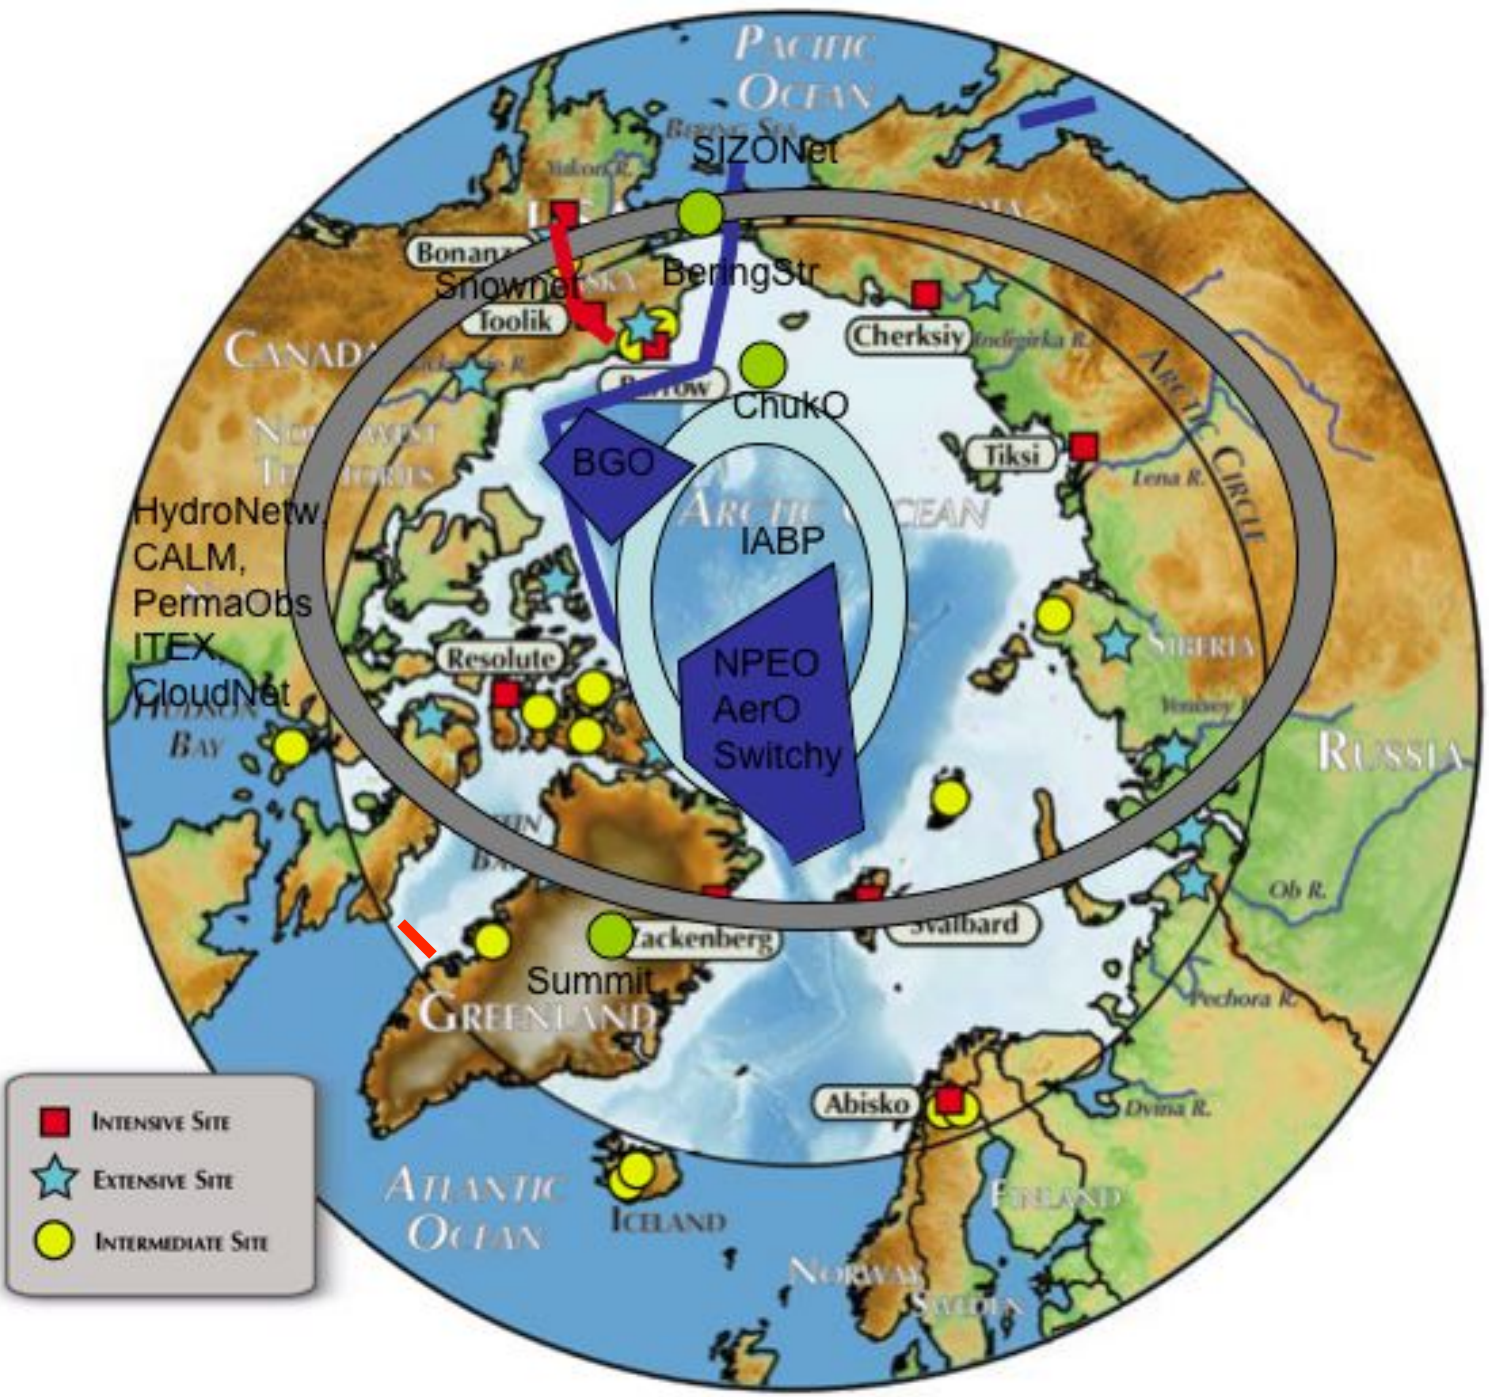

- ❖ **Science Plan** published in 2001 and initial implementation strategy published in 2003.
- ❖ **Multi-agency sponsorship** 8 U.S. agencies - NSF, NASA, NOAA, Department of Defense, Department of Energy, Department of the Interior, Smithsonian Institution, Department of Agriculture.
- ❖ **Open Science Meeting 2003** assessed the state of arctic change science and established research priorities.
- ❖ SEARCH **Implementation Workshop 2005** - plan for IPY and beyond.

SEARCH Activities & Implementation

- ❖ **Over 150 projects and activities:** “Observing”, “Understanding”, and “Responding” to change
 - **Observing Change: Ocean and Sea Ice, Atmosphere, Hydrology and Cryosphere, Terrestrial Ecosystems, Human Dimensions, Paleoclimate**
 - **Understanding Change:** Modeling and Analysis
 - **Responding to Change:** Applications focused on social and economic concerns
- ❖ **International connections:** Expanding international connections

SEARCH for DAMOCLES (S4D)

- ❖ The SEARCH for DAMOCLES (S4D) partnership was established to:
 - Coordinate systematic ocean, atmosphere and ice observations
 - Consolidate long-term observations required for documentation and modeling of change
 - Establish common European/U.S. databases and contribute to international programs

S4D Steering Committee

- ❖ Jean-Claude Gascard, co-chair, Universite Pierre et Marie Curie
- ❖ Peter Schlosser, co-chair, Columbia University
- ❖ Cecilie Mauritzen, Norwegian Meteorological Institute
- ❖ Hajo Eicken, University of Alaska
- ❖ Ralf Döscher, Swedish Meteorological and Hydrological Institute
- ❖ John Walsh, International Arctic Research Center
- ❖ Greta K. Hovelsrud, Center for International Climate and Environmental Research
- ❖ Jack Kruse, University of Massachusetts
- ❖ Øystein Godøy, Norwegian Meteorological Institute
- ❖ Matthew Berman, University of Alaska
- ❖ Klaus Dethloff, Alfred Wegener Institute
- ❖ Mark Parsons, National Snow and Ice Data Center
- ❖ Ursula Schauer, Alfred Wegener Institute

Possible S4D Next Steps

SEARCH has moved from planning stage to implementation stage and is now well-placed for research coordination activities within the S4D framework:

- ❖ **Assessment and comparison of funded activities** within SEARCH and DAMOCLES to advance integration of Arctic Ocean research
 - SEARCH has begun a comprehensive assessment of currently funded SEARCH-related activities in the U.S.
- ❖ Potential **future workshops** (spring 2008, follow-up to October 2007 Paris workshop)
 - Integration: Ongoing observing and analysis activities. Specific science foci- causes and consequences of the unexpectedly rapid decline in the arctic sea-ice cover during 2007, others...
 - Autonomous and Lagrangian platforms in an Arctic Ocean with shrinking ice

SEARCH-Related Ocean Activities

Observing Activities - types of activities include: data rescue; improvement of observation density, calibration, a sampling strategies; observations of key processes and studies of feedbacks; acquisition of paleo-data over use of innovative and effective technology.

Project/Activity Name	Description	Research Location	Agency	Program
Environmental Variability, Bowhead Whale Distributions, and Inshore Subsistence Wishing - Linkages and Resilience of an Alaskan Coastal System	The coupling between atmosphere, sea ice, ocean, bowhead whales, and subsistence wishing by the Native human population is fundamental to the physical, biological, human systems of the Northwest	Alaska	NSF	ARCSS Study of the Northern Alaska Coastal System (SNACS)
Developing an Understanding and Predictive Capability for the Interconnections Among Arctic Terrestrial, Atmospheric, and Marine Systems	tightly linked to the earth arctic systems (land, ocean, and atmosphere) and are highly sensitive to the effects of global warming (interdisciplinary) Arctic Terrestrial and marine ecosystems store 25-33% of the world's soil organic carbon (SOC), and large amounts of long-lived sequestered OC is rapidly released by erosion along	Alaska	NSF	ARCSS Study of the Northern Alaska Coastal System (SNACS)
Flux and Transformation of Organic Carbon across the Erosion-Crestline of				ARCSS Study of the Northern Alaska Coastal System

Thank You

SEARCH Website:

<http://www.arcus.org/SEARCH/index.php>

The screenshot shows the SEARCH website homepage. At the top left is the SEARCH logo, a circular emblem with a globe and the text 'SEARCH Study of Environmental Arctic Change'. Below the logo is a blue banner with the text 'STUDY OF ENVIRONMENTAL ARCTIC CHANGE'. The main content area is divided into a left sidebar and a main text area. The sidebar contains a list of links: SEARCH Science, SEARCH Projects, Resources, Meetings, Science Coordination, International SEARCH, ISAC, DAMOCLES, Contact Information, and Home. The main text area features a heading 'Welcome to SEARCH' followed by a sub-heading 'A system-scale, cross-disciplinary, long-term arctic research program'. Below this is a paragraph describing SEARCH as an interagency effort to understand Arctic changes. A bulleted list of impacts is provided: increased air temperatures, changing ocean circulation and rising sea level, reduced sea ice cover, and thawing permafrost. To the right of the text is a photograph of a coastal village with buildings on a cliffside, with a caption: 'Coastal erosion due to thawing permafrost and increased wave action threatens several arctic communities, including Shishmaref, Alaska. Photo © Native Village of Shishmaref. Courtesy of Luci Enngowuk'. At the bottom of the main text area, it states that more than 40 projects are funded as SEARCH activities by U.S. agencies and that more information is available through links to the left.
